

Quicken® NanoLube

from **GROBET USA®**

Specifically formulated for horologists

- Eliminates friction and wear
- Will not break down
- Use less
- Lasts longer

NanoLube contains NanoDiamonds. The NanoDiamonds act as ball bearings, eliminating friction and wear. Over time, standard chemical lubricants break down cake-up and stop lubricating. NanoDiamonds are .1 to 4 nanometer synthetic diamond ball bearings that never wear out. NanoDiamonds adhere to the applied surfaces even after the carrier oil has evaporated, reducing friction and preventing wear.

On average, it takes 80,000 NanoLube particles to span the width of a human hair - and all particles are spherical, synthetic diamond.

Part Number	Description	Size
No. OL 420100	for Clock heavy	2 ml
No. OL 420101	for Watch light	1.5 ml
No. OL 420102	for Multi-Purpose medium	1.5 ml
